POLYVINYLPYRROLIDONE (PVP)

PVP is an exclusive surface treatment applied to FCI lacrimal products to improve the hydrophilic properties of silicone. The benefit of such a treatment is to enhance the efficiency of tear drainage and to limit the accumulation of debris at the surface of our silicone intubations and perforated plugs.

PVP Perforated Plugs
Designed by J.-A. Bernard, M.D.
- PVP coated medical grade silicone
- Slanted collarette for a perfect anatomical fit against the eyelid margin
- Exclusive polishing for a perfectly smooth surface
- 2 models available: standard & mini
- Preloaded on a disposable plug inserter to facilitate the insertion
- Sterile

PUNCTAL STENOSIS

FCI PVP perforated plugs are used to treat excessive tearing due to partial occlusion of punctum and punctal stenosis. They act as a conformer by keeping the punctal opening dilated for several weeks, allowing tears to be drained through.

DACRYOCYSTOPLASTY

Ophtacath®
Ophtacath® is a lacrimal duct balloon catheter kit indicated for the dilation of an obstructed nasolacrimal duct. It consists of a semi-flexible stainless stylet covered by a tubing and finished by a Nylon Polyn® balloon. The balloon catheter works with a disposable inflation system to dilate the obstructed nasolacrimal duct, which is a most efficient solution to treat rapidly and durably the symptoms of epiphora.
- Proven results
- Fast and efficient procedure
- Easy to insert & to remove
- Exclusive tapered tip
- Exclusive balloon design retains folding memory
- Exceptional resistance to burst pressure
- Highly precise inflation system
- Available in 2 diameters: 2 mm (infants) & 3 mm (adults)
- Unilateral or bilateral versions
- Includes disposable inflation device
- Sterile

## INTUBATION SETS

### MONOCANALICULAR INTUBATION

**Mini-Monoka®**

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- Indicated for monolacrical lacerations
- FCI exclusive design
- Gold standard for canalicular repair
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- Medical grade silicone – PVP option
- Sterile

### MONOCANALICULAR NASOLACRIMAL INTUBATIONS

**Masterka®**

Masterka® is FCI latest innovation for treatment of congenital nasolacrimal duct obstruction resistant to probing. Unlike the traditional “pulled” technique in which the stent is advanced through the nasolacrimal system and retrieved through the nose by pulling on the guide probe or thread, the Masterka® has no metallic probe or suture attached to it and, therefore, it is not pulled out of the nose.

Instead, the Masterka® is pushed into the nasolacrimal duct and anchored in place at the punctum by a plug-like fixation head.

- FCI exclusive design
- Easy to insert
- No nasal retrieval
- No knots
- No sutures
- Less traumatic
- Requires sizer (S1.1289) to select the length & 0.3 mm disposable punctum dilator and plug inserter (S1.3090)
- Available in 3 lengths: 30, 35 and 40 mm
- 3 mm plug collarette
- Medical grade silicone
- Sterile

MONOCANALICULAR NASOLACRIMAL INTUBATIONS

FCI Monoka® intubation systems have been designed to effectively treat nasolacrimal duct obstructions and canalicular stenosis. The stents are securely anchored at the punctum by a plug-like fixation head.

Self-threading Monoka® (Ritleng® type)
Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- FCI exclusive design
- Reduced trauma and procedure time
- 3 mm medium or 4 mm wide plug collarette
- PEEK (PolyEtherEtherKetone) black thread
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with Ritleng® set of instruments (S1.1460, S1.1470, S1.1480)
- Medical grade silicone – PVP option
- Sterile

Monoka® of Fayet (Crawford Guide)
Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- FCI exclusive design
- 3 mm medium or 4 mm wide plug collarette
- Stainless steel probe with non-traumatic rounded olive tip
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with the Crawford hook (S1.1275) for endonasal retrieval of the probe
- Medical grade silicone
- Sterile

### Bicanalicular Intubation

**Autostable Intubation Set II**

The Autostable Intubation Set II is indicated to treat punctal stenosis and horizontal lacrimal duct obstruction. Thanks to the rigid guides inside the silicone tube, the placement of the Autostable Intubation Set II is straightforward, and can be done as an office procedure.

- FCI exclusive design
- Silicone wings at each end ensure the stability in the lacrimal sac
- Central mark to control tube placement
- Supplied with disposable dilator
- Available in 3 lengths: 25, 30 and 35 mm
- Requires sizer (S1.1289) to select the appropriate length
- Medical grade silicone
- Sterile

**FCI Nunchaku®**

FCI Nunchaku® is a pushed silicone self-retaining bicanalicular nasolacrimal intubation stent that acts like a conformer, allowing tears to be drained by capillarity. The metallic guides are located inside the lumen, not as an extension of the stent as in conventional intubation sets. Therefore, no nasal retrieval is needed. The stability is guaranteed by the design of the silicone tubes: no need to make knots and sutures in the nasal fossa.

- Indicated for canalicular pathologies, congenital lacrimal duct obstruction & dacryocystorhinostomy (DCR)
- FCI exclusive design
- No nasal retrieval
- No knot or suture needed
- Available in 2 lengths: 90 mm (infants) and 105 mm (adults)
- Medical grade silicone
- Sterile

INTUBATION SETS

BICANALICULAR NASOLACRIMAL INTUBATIONS

Ritleng® Lacrimal Intubation Set
Ritleng® intubation system consists of a silicone (or PVP) tube connected at each extremity to a Poly Ether Ether Ketone (PEEK) thread guide to reduce time and trauma in lacrimal duct intubation surgery.

The procedure involves inserting the hollow Ritleng® Probe into the nasolacrimal duct and feeding the thin PEEK thread through it.

The probe is then withdrawn, leaving the PEEK to pull the silicone tubing into place.

- FCI exclusive design
- Less traumatic for patients
- Easy retrieval from the nose
- Medical grade silicone - PVP option
- Sterile

**IN TUBATION SETS**

**BICANALICULAR NASOLACRIMAL INTUBATIONS**

FCI BIKÀ® intubation systems have been the first models designed for bicanalicular intubation, especially in case of congenital nasolacrimal duct obstruction and dacryocystorhinostomy (DCR). The metallic probes are securely connected at the silicone tube for an easy and safe retrieval from the nose.

**Designed by J.-A. Bernard, M.D.**
- FCI exclusive design
- Strong connection between silicone tube and metallic probe
- Non-traumatic rounded tip
- Many different designs available

**INFANT BIKÀ®**
- 0.64 mm silicone tube / 55 mm long & 0.4 mm diameter metallic probe
- Probe embedded in silicone tube / Perfectly smooth junction
- Indicated for newborn
- Medical grade silicone
- Sterile
